TOXICOLOGICAL INFORMATION  
-----

## Animal Data

## Tribenuron Methyl

Inhalation 4 hour LC50: > 6.0 mg/L in rats  
(Very low toxicity)  
Skin absorption LD50: > 5000 mg/kg in rats  
(Very low to slightly toxic)  
Oral LD50: > 5000 mg/kg in rats  
(Very low toxicity)

Tribenuron Methyl is an eye irritant, and a skin sensitizer, but is not a skin irritant in animals.

Material Safety Data Sheet  
(TOXICOLOGICAL INFORMATION - Continued)

The effects in animals from a single ingestion exposure to Tribenuron Methyl include severe weight loss and decreased food consumption. Repeated ingestion of high doses of Tribenuron Methyl caused body weight loss, increased liver and thyroid/parathyroid weights, altered clinical chemical parameters, but no significant gross or microscopic treatment related effects were noted. Long-term dosing caused body weight loss, alteration in clinical chemical parameters, and testicular atrophy (considered to be biologically insignificant).

Tribenuron Methyl produced an increased incidence of mammary tumors in female rats at dose levels also producing other significant effects. Developmental effects occurred in the rat, but only at a dose also toxic to the dam. No reproductive effects were observed in rats. Tribenuron Methyl did not produce genetic damage in bacterial or mammalian cell cultures or in animals.
