

DuPont™ FE-25™

The Preferred Alternative for Halon 1301 in Existing Systems

Protect what matters most

The miracles of science

DuPont is proud to continue its tradition of safety with the introduction of FE-25™ as the preferred replacement for Halon 1301 in existing systems. With FE-25™, DuPont is the only supplier capable of providing a full range of non-ozone depleting fire extinguishants for both new and existing systems on a global basis. The reasons for using DuPont™ FE-25™ versus other Halon 1301 replacement options when retrofitting an existing suppression system are compelling. FE-25™ is safe for people, safe for assets and safer for the environment. There is no question that DuPont™ FE-25™ is the preferred Halon 1301 retrofit replacement.

DuPont™ FE-25™ is HFC-125. It is electrically nonconductive, noncorrosive, free of residue, has zero ozone-depletion potential (ODP) and is an environmentally preferred alternative to Halon. As a clean agent, FE-25™ mixes thoroughly in air and does not leave behind any residue, which would cause damage or pose a post-fire clean-up problem. This means no collateral damage and minimal business interruption. DuPont™ FE-25™ is intended to protect people, high value assets and the continuity of business.
