

DuPont Filaments

Oral Care Brush Applications

The miracles of science™

Premium Quality. Expert Support.

DuPont Filaments has been providing premium quality filaments to the oral care industry for over 60 years. Current filaments come in various sizes, shapes and colors for the broad range of electric and manual toothbrushes, interdental brushes, floss threaders and tongue brushes. The Tynex® brand of filaments offers you, the brushmaker/marketer, a reliable source of a premium product.

DuPont representatives covering over 65 countries provide technical and marketing experience to support your brushmaking and business efforts.

Manufacturing

With over 60 years of filaments engineering, we continue to pioneer innovative synthetic filaments to address consumer trends and help our partners exceed their consumers' expectations.

Superior Performance

Long lasting, premium quality Tynex® filaments from DuPont offer a variety of synthetic filament options for all your oral care brush applications. In clinical studies, Tynex® filaments continue to show improved wear capabilities and greater bend recovery compared to other materials. Our precise control over the production process ensures that DuPont™ Tynex® filaments feature optimal end-rounding for greater comfort.

DuPont™ Tynex® filaments feature optimal properties for end-rounding for greater comfort.

Maximum Design Flexibility

DuPont filaments enhance your ability to design versatile and innovative products with specially engineered shapes and textures to meet your specific development requirements. With almost limitless choices of textured shafts, variable lengths and unique colors, you can enjoy maximum versatility in your product designs.

Useful Shapes

Round

Enhanced durability for long-lasting maximum cleaning performance

Rectangular

Rectangular profile can deliver unbeatable cleaning

Diamond

A unique shape that allows for more light refraction, producing brighter colors

Hexagonal

A greater surface area and better interdental penetration for increased effectiveness

Unique Textures

Feathered

Crafted with small spaces and welds along the length of the filament, the ends can be "split" to create numerous, multi-fine feathers which provide soft, cushioning tips while retaining normal stiffness at the base. Feathered filaments from DuPont provide premium comfort and greater interdental penetration for more effective cleaning.

Embossed

The "bumpy" surface may allow for better cleaning. Plus its "glistening" appearance creates a striking display for maximum brand differentiation.

Wavy

Small "bends" through the length of the filament provide for good toothpaste pick up and create contrast in color, giving brushes a distinctly different appearance.

Brilliant Colors

The DuPont Filaments Brilliance Collection takes advantage of a unique diamond profile that increases the light refraction for brighter colors as well as easier penetration between teeth.

Trusted DuPont Manufacturing Expertise

DuPont filaments are specifically engineered and packaged to ensure easy processing in your equipment. With tight diameter control and a proprietary surface finish, you can count on maximum throughput in today's high-speed brushmaking machines.

Strict adherence to ISO 9002 manufacturing standards means you can trust DuPont Filaments to meet your requirements regardless of where they are produced. With a broad range of filaments to meet most product needs, and the manufacturing expertise to maximize your production efficiency, DuPont Filaments is a partner you can trust.

Let's Get Specific

For more information on how DuPont Filaments can help meet your brush design and manufacturing specifications, please visit us on the web at filaments.dupont.com or contact a local representative at one of these locations:

North America

DuPont Filaments-Americas, LLC
Washington Works Plant
8480 DuPont Road
Building 158
Washington, WV 26181
