**DuPont Fuel Cells Highlights Commitment to Clean Energy at Hannover Messe 2009**  
*Launches New DuPont™ Nafion® XL Membrane Electrode Assembly*

HANNOVER, Germany, April 23, 2009 – DuPont Fuel Cells today reiterated its commitment to develop clean energy technology in an interview during the Public Forum at the Group Exhibit Hydrogen + Fuel Cells, Europe’s largest hydrogen and fuel cell expo. The Group Exhibit Hydrogen + Fuel Cells has been part of Hannover Messe Fair since 1995, with more than 148 exhibitors from 22 countries in 2009.

“The primary focus of DuPont Fuel Cells is squarely in the catalyst coated membrane and Membrane Electrode Assembly (MEA) business. We’re unlike other MEA producers since DuPont has a combination of stable electrochemistry, fluoropolymer/ionomer expertise and global mass production scalability,” said John Colven, global business manager, DuPont Fuel Cells. “We are the only MEA manufacturer in the world with these three critical elements in place today, and we are uniquely positioned to increase manufacturing efficiency to meet industry cost of ownership goals. We’re hoping this will help speed the adoption of fuel cells.”

In keeping with this commitment, DuPont announced commercial availability of DuPont™ Nafion® XL Membrane Electrode Assemblies based on an extended life reinforced membrane that combines the advantages of mechanical reinforcement with enhanced chemical stability, enabling improved membrane durability.
