

# Irrigation Ditch Management Guideline

The following irrigation ditch diagram outlines the appropriate areas for the application of DuPont Vegetation Management products on irrigation ditch structures:

<b>Area A:</b>	The area inside the irrigation ditch.	DuPont™ Karmex® XP may be applied to the inside of the irrigation ditch structure <b>when water is not present</b> . Fall applications are recommended. Consult the label for proper application timing.
<b>Area B:</b>	The area outside the irrigation ditch, including the berm and outer slope.	Karmex® XP, DuPont™ Hyvar®, Krenite® S, Krovar® I DF, and Velpar® products may be used in this area. NOTE: Area B must not collect and return runoff water into Area A that results in contamination of the irrigation ditch.
<b>Area C:</b>	The area outside the irrigation ditch structure and its outer banks.	Any DuPont Vegetation Management product may be used in this area.

## Applications near water and wetlands

All herbicides are regulated by the EPA. If a herbicide has an aquatic label, it may be used as specified in or around water. The EPA requires other herbicides to limit usage as follows:

*Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high-water mark.*

## Important notice

Do NOT use DuPont™ Escort® XP, Landmark® XP, Oust® XP, Oust® Extra, Telar® XP or Westar® **in, on or around irrigation canals, irrigation ditches or their outer banks.**

## For more information
