

DuPont™ Escort® XP

herbicide

Foliar brush recommendations for roadsides and utility sites

Use of a combination of DuPont™ Escort® XP + Garlon 3A herbicide for brush control combination will provide the following benefits:

- Broader spectrum of control on problem brush species.
- Reduces regrowth to reduce repeat applications.
- Selective to most understory grasses.
- Absorbed primarily through foliage, lesser degree of uptake from the soil into plants.

Here's how to apply

The recommended fixed-boom rate, at a minimum of 40 gallons of carrier per acre:

- Escort® XP (2 ounces) + Garlon 3A (2 quarts)

High-volume handgun rate at a minimum of 40 gallons of carrier per acre:

- Escort® XP (2 ounces) + Garlon 3A (2 quarts)

Low-volume backpack rate (mixed in 100 gallons of water):

- Escort® XP (8 ounces) + Garlon 3A (16 quarts) + 1 gallon of silicone-blended adjuvant. Apply this solution at 10-25 gallons per acre.

Timing and other considerations

- Apply to actively growing brush up until fall leaf drop.
- To reduce brownout appearance, spray in the fall prior to coloration.
- Red cedar and Douglas fir are better controlled in the early summer.
- Use 3 pints of a silicone-based adjuvant per 100 gallons of spray solution.
- Read and follow the label instructions of both Escort® XP and Garlon 3A when tank mixing. Follow the most restrictive limitations of any of the product labels being tank mixed.
