

Noxious

# DuPont™ Krenite® S

brush control agent

## Leafy spurge control

DuPont™ Krenite® S can provide good to excellent control of leafy spurge in sensitive areas where tree roots occur or in areas of temporary or intermittent surface water.

It is permissible to apply Krenite® S to seasonally dry flood plains where surface water is not present, or to terrestrial areas of deltas and low-lying areas where water is drained, but may be isolated in pockets due to uneven ground conditions.

### Krenite® S attributes

- Selective to desirable grass species.
- No off-target root uptake to desirable trees and vegetation occurs.
- Very low toxicity to animals, wildlife, fish and insects when used in accordance with the label.
- Should have effective control one year after application.
- Due to its rapid degradation, Krenite® S is highly unlikely to cause ground or surface water contamination risk.

### Application techniques

- The use of additional surfactant is recommended. A silicone blend is preferred.
- Full coverage to the leaves and stems is required during **full bloom stage**.
- Krenite® S can be applied by air or ground equipment.
- No further agitation is required after being well mixed in water.

### Timing of the application

- Apply only during the bloom to early-post bloom stage (true flower stage). Applications outside this time period will result in poor weed control.
- No “brown out” discoloration occurs following the application.
- Krenite® S inhibits bud formation to kill the plant.

### Site considerations

- Do not mow or cultivate the site.
- Do not spray directly into any body of water.
- Krenite® S is nonvolatile, nonflammable and has no odor.
- Krenite® S is not registered for use on areas where livestock may be grazed.

### Rates

- Apply Krenite® S at 1.5 gallons per acre.
- Re-treat escapes in the second year after initial application.
