

# DuPont™ Cimarron® MAX

herbicide

*Weed control for pastures, rangeland and CRP*

Effective, affordable weed control is the key to realizing the full potential of today's pastures and rangeland. Managing weeds maximizes grass yield and quality, which ultimately leads to more cattle weight gain per acre.

## DuPont™ Cimarron® MAX herbicide

Now there's a stronger weed control option to help improve the quality and yield of your pastures and rangeland.

A single application of Cimarron® MAX herbicide can provide season-long control of a broad spectrum of weeds, including yellow starthistle, whitetop and the thistle complex.

Field observations show that Cimarron® MAX programs outperform the competition. When compared to products and programs on the market today, Cimarron® MAX programs provide consistent control of weeds over time. They also manage a broader spectrum of weeds, controlling sericea lespedeza, broom snakeweed and the thistle complex — weeds that the other programs miss.

## Better grass production

Better weed control adds up to better grass production and more forage per acre. DuPont clipping studies show nearly two to three times more grass produced in areas treated with Cimarron® MAX. For example:

- A bermudagrass clipping study showed that bermudagrass treated with Cimarron® MAX produced an average of 1,845 pounds of grass per acre, nearly three times the 680 pounds per acre in the untreated check.\*
- A similar study in native grass forage showed that native pasture/rangeland grasses treated with Cimarron® MAX produced an average of 2,699 pounds of grass per acre, nearly two times the 1,513 pounds per acre in the untreated area.\*

\* Grass weights are recorded as dry weight in lbs. (SWK-02-005, SWK-02-024)

## Benefits of using Cimarron® MAX

- Contact and residual activity with broad-spectrum control in one application.
- Flexible use rates to match the specific weed problems on your land.
- Wide application window gives you more time to work around your schedule and the weather.

- Excellent grass safety.
- There is no waiting period between application and the grazing of livestock.
- Systemic action eliminates entire plant, roots and all.
- Not a federally restricted-use pesticide.

## Use recommendations

### Here's how it works

When mixed and applied as recommended, Cimarron® MAX effectively controls the weeds listed on the following page.

### Use rates for pasture and rangeland (see label for complete details)

DuPont™ Cimarron® MAX is a two-part product used in a ratio of 5 ounces of Cimarron® MAX Part A to 2.5 gallons of Cimarron® MAX Part B. The table below shows the number of acres treated with Cimarron® MAX at various application rates:

Cimarron® MAX rate	Cimarron® MAX Part A rate (oz/A)	Cimarron® MAX Part B rate (pt/A)	# Acres treated with 5 oz Part A + 2.5 gal Part B
Rate I	0.25	1	20
Rate II	0.50	2	10
Rate III	1	4	5

Note: Do not apply more Cimarron® MAX than the equivalent of 1½ ounces per acre of Cimarron® MAX Part A herbicide per acre per year.

### Weed and brush species managed

Cimarron® MAX helps manage more than 150 tough weed and brush species in rangeland, pasture and CRP, including:

Blackberry	Rose, multiflora
Buckbrush*	Sagebrush, big*
Buttercup, bur	Starthistle, yellow
Gumweed	Teasel
Knotweed, prostrate*	Thistle: Canada*, musk, Scotch, wavyleaf
Milkweed species*	
Mullein, common	Whitetop (hoary cress)
Pepperweed, perennial	Woad, dyer's
Ragweed, western	

See the Cimarron® MAX label for recommended rates for control of the above weeds.

\* Indicates weed or brush suppression. Suppression is a reduction in weed or brush competition (reduced population and/or vigor) as visually compared to an untreated area. The degree of suppression varies with the rate used, the size of the weeds or brush, and the environmental conditions following treatment.

### Broadcast application

- Cimarron® MAX is a two-part product consisting of Cimarron® MAX Part A and Cimarron® MAX Part B, which must be tank mixed together.
- Apply Cimarron® MAX when weeds are young and actively growing.
- Refer to the Cimarron® MAX label to determine the proper use rate for the specific weed problems on your land.

### Precautions

Cimarron® MAX is recommended for use on land primarily dedicated to the production of pasture, rangeland or CRP.

Fescue and timothy can be sensitive to Cimarron® MAX applications. Refer to label for use directions before using Cimarron® MAX on fescue or timothy.

Also, applications of Cimarron® MAX to ryegrass or Garrison creeping foxtail pastures may cause severe injury to and/or loss of pastures.

### For more information

Contact your local DuPont crop protection retailer or DuPont representative for more information about Cimarron® MAX herbicide from DuPont. And visit us on the Web at [cimarron.dupont.com](http://cimarron.dupont.com).

DuPont™ Cimarron® MAX herbicide is not available in all states. See your local DuPont retailer or representative for details and availability in your state.
