To help our customers gain competitive advantage in the global packaging graphics value chain.

DuPont Packaging Graphics continues to be a global technology leader in supplying flexographic printing systems. Our scientists continue to develop unique solutions based on new technologies to help our customers expand their business by taking advantage of new profitable packaging printing opportunities. DuPont Packaging Graphics portfolio of products includes Cyrel® brand photopolymer plates (analogue and digital), Cyrel® platemaking equipment, Cyrel® round sleeves, Cyrel® plate mounting systems and the revolutionary Cyrel® FAST thermal system.

Cyrel® NEOS is DuPont’s analogue medium soft printing plate for the broadest range of applications, from narrow web label printing to oversized preprint. It combines low dot gain with high ink transfer for smooth solids.

**Applications**
- Flexible packaging
- Film printing
- Tag & label
- Carrier bags
- Rough paper substrates
- Beverage cartons

**Product Features**
- High plate making and press latitude enables success under many conditions
- Even under changing conditions such as temperature and humidity Cyrel® NEOS offers a very consistent plate making performance
- High resistance to ozone and white light results in excellent storage capability
- Requires minimum impression settings, giving good balance between solids and screens
- Proprietary surface technology prints smooth solids
- Low surface tack makes handling easy

**Printing ink and solvent compatibility**
Cyrel® NEOS offers excellent compatibility with solvent-based, water-based inks and also with many UV inks.

**Process of use**
Expose the plate through the back to establish the floor and maximize sensitivity. Back exposure varies according to relief required. Remove the protective coversheet and expose the front of the plate. Process the plate in the Cyrel® plate processor. Finish the plate in a light finisher to eliminate surface tackiness. Post-expose the plate to ensure complete polymerisation.

**Mounting**
Cyrel® Microflex mounting devices are recommended for mounting Cyrel® NEOS plates. The double sided adhesive should first be applied to the cylinder or sleeve – not the plate – to ensure easier and precise laydown. The polyester base will maintain accurate register even with large plates.
Storage – Raw Material
Store unexposed plates in a cool area (4-32° C), away from direct sources of heat. Humidity control is not required. Cyrel® NEOS is foam interleaved to provide maximum protection of the plate after manufacture, and during transportation and storage. Plates should be stacked flat. Plates should not be exposed to direct sunlight or excessive white light. Continuous exposure to very high ozone concentrations should be avoided.

Handling – Raw Material
Cyrel® NEOS plates should be handled under UV free light; e.g. fluorescent tubes covered with amber sleeves.

Storage – Finished Plates
After printing, plates should be thoroughly cleaned with compatible solvent before storing. They may be stored on cylinders, sleeves or demounted and stored flat.
