

DuPont Personal Protection

ONLINE TOOLS FOR SELECTING DUPONT™ GARMENTS

Interactive software simplifies task of selecting DuPont™ garments

DuPont Personal Protection puts product selection tools at your fingertips.

For more than 200 years, DuPont has responded to the world's safety needs with the best in safety technologies and innovations. From first responders to industrial workers, DuPont provides protective apparel solutions to meet demanding safety requirements.

The DuPont difference

With DuPont Personal Protection, you get the advantage of a wide range of proven, science-based solutions, including some of the most trusted brands in the industry such as: DuPont™ Tyvek® for dry particulate hazards; DuPont™ Tychem® for liquid and gas chemical hazards; DuPont™ Nomex® for thermal hazards; and DuPont™ Kevlar® for cut and abrasion protection.

You also get the added advantage of tapping into the extensive resources available from DuPont Personal Protection. For example, our website (www.PersonalProtection.DuPont.com) features four easy-to-use, interactive tools—DuPont™ SafeSPEC™, the Product Comparison Tool, the Tychem® Fabric Permeation Comparison Tool and the Chemical Resistance Database—that put a wealth of valuable information at your fingertips.

The miracles of science™

DuPont™ SafeSPEC™
DuPont™ SafeSPEC™ is an interactive software tool that provides data to help you make informed decisions about

choosing the appropriate protective apparel for a specific chemical hazard. Our databases include hundreds of chemicals, including warfare agents and the ASTM F1001 standard list of challenge chemicals. All you have to do is enter information on a chemical hazard and the anticipated exposure for your situation. Based on this information, DuPont™ SafeSPEC™ will then provide you with a selection of garments and accessories to consider. It's that simple. For your convenience, you can also download DuPont™ SafeSPEC™ to your desktop to use offline.

Product Comparison Tool

The Product Comparison Tool enables you to create side-by-side comparisons of features and physical properties by DuPont Personal Protection garment style and fabric, using convenient drop-down boxes. Compare as few as two styles or as many as four. Product comparisons can be made in two categories:

1. Chemical/Hazmat protection
2. General protection

Tychem® Fabric Permeation Comparison Tool

The Tychem® Fabric Permeation Comparison Tool enables you to create side-by-side comparisons of permeation test data for each DuPont™ Tychem® fabric that you select, using a convenient drop-down box. You can compare up to three fabrics at a time.

The Product Comparison Tool shows garment features and physical properties for each style you select.

Chemical Resistance Database

The Chemical Resistance Database features permeation resistance and chemical properties for hundreds of chemicals, including warfare agents and the ASTM F1001 standard list of challenge chemicals. Using this database is easy and searches can be done by chemical or by fabric. To search by chemical, you can either enter a chemical name or CAS number. You can even use partial chemical names to search and select. To search by fabric, simply use the convenient drop-down box to make your selection.

Put our online tools to work

Visit our website at www.PersonalProtection.DuPont.com and see for yourself how these interactive tools can help make your job easier. With a few simple keystrokes or mouse clicks, you can quickly obtain data to help you make informed decisions about the most appropriate protective apparel to meet your specific needs.
