DuPont™ Manzate® Pro-Stick™ *

fungicide

Rain, rain go ~~away~~ ahead!

Don't let a little rain spoil your plans. New DuPont™ Manzate® Pro-Stick™ fungicide delivers the superior disease control growers have come to expect from Manzate® in a new formulation that sticks to your tomato crop better — rain or shine. Manzate® Pro-Stick™ also dissolves quicker and stays in solution better so you get improved crop coverage and spray performance.

Introducing new Manzate® Pro-Stick™

- **Contact fungicidal activity:** Helps manage major threats to your tomatoes. Provides excellent preventive control of early blight and late blight. Manzate® Pro-Stick™ also provides excellent control of bacterial speck and bacterial spot when used in a tank-mix with DuPont™ Kocide®.
- **Preventive, multisite mode of action:** No known resistance development makes Manzate® Pro-Stick™ a perfect fit for any Integrated Pest Management (IPM) program.
- **New, optimized formulation of mancozeb:** More-uniform suspension in the tank for improved sprayability.

- **Maximum rainfastness:** This premium formulation sticks to your crop better — excellent tenacity coupled with reliable residual activity results in effective disease control.
- **Economical and effective:** Count on Manzate® Pro-Stick™ to provide reliable disease control, for healthier plants and opportunity for higher yields.

How to get the best results with Manzate® Pro-Stick™

- Begin application before conditions favor disease development or at the first sign of disease.
- Manzate® Pro-Stick™ is a protectant fungicide and should be applied prior to infection to achieve the best results.
- If control of a broader disease spectrum is desired, a tank-mix application with another registered fungicide may be used. Consult the label for crop-specific timing, rates and label restrictions.
- Use sufficient water to provide thorough coverage — 20 to 100 gallons per acre for ground equipment and no less than 2 gallons per acre for aircraft.

- Add Manzate® Pro-Stick™ slowly to water in the spray tank with agitation, or premix thoroughly in a separate holding tank for concentrate or aircraft sprayers.
- Continuous agitation is required to keep the product in suspension.
- A spreader-sticker spray adjuvant may be used with this product if desired.
