DuPont™ Classic®

herbicide

Improve your weed control in glyphosate-tolerant soybeans

DuPont™ Classic® herbicide can help make a good herbicide program even better. A glyphosate-based soybean program has allowed soybean producers to manage their soybeans in a whole new way. However, even a glyphosate-tolerant soybean program may need help on some weeds.

Key benefits

- Improved control of key weeds over glyphosate alone, including: morningglories, hemp sesbania, yellow nutsedge, wild poinsettia and cowpea.
- Cost-effective way to help provide consistent results.
- Extra mode of action to help manage weed resistance.

Rate recommendation

- Classic® 0.33 oz/A + glyphosate
- For tropical spiderwort suppression, Classic® 0.5 oz/A + glyphosate when weeds are not larger than 2 inches.

Application information

- For best control of morningglories use Classic® at 0.33 oz/A.
- See the glyphosate manufacturer's label for specific ammonium sulfate and surfactant recommendation.
- Classic® may be applied anytime after the first trifoliolate has opened but no later than 60 days before soybean maturity.
- Classic® may be tank mixed with DuPont™ Asana® XL insecticide for control of corn earworms, bean leaf beetles and many other insects. Refer to label for use with other insecticides.

For more information

See your DuPont retailer or call your local DuPont representative for more information about Classic® herbicide from DuPont. And visit us on the Web at classic.dupont.com.

Asana® XL is a restricted-use pesticide.

This reference guide is not intended as a substitute for the product label for the products referenced herein. Product labels for the above products contain important precautions, directions for use and product warranty and liability limitations that must be read before using the product. Applicators must be in possession of the product label(s) at the time of application. Always read and follow all label directions and precautions for use when using any pesticide alone or in tank mix combinations.
