

Summer fallow, stubble and post harvest applications

DuPont™ Agility™ SG

herbicide

With TotalSol® soluble granules

Get fallow fields ready for your next crop and keep your fallow acres clean longer between applications

Fallow is an open invitation to weeds. Left unchecked, those weeds will rob your fields of the nutrients and moisture your next crop will need to thrive.

A DuPont herbicide program can control weeds while eliminating extra tillage operations. Fewer tillage trips will save you diesel fuel and equipment wear. You'll also help to keep that valuable moisture and nutrients in your soil.

So don't leave your fallow fields at the mercy of tough broadleaf weeds. Take control with DuPont™ Agility™ SG herbicide with TotalSol® soluble granules.

Count on DuPont for more control, more convenience and fewer trips

DuPont™ Agility™ SG herbicide with TotalSol® soluble granules, is an advanced formulation that's designed specifically to go after group 2 resistant kochia and other tough broadleaf weeds. It combines the power of four active ingredients — with two modes of action — in an advanced formulation that delivers reliable control of ALS-resistant and ALS-tolerant varieties of kochia.

But that's only the beginning. Agility™ SG also controls prickly lettuce, pigweeds, common cocklebur, common ragweed, common lambsquarters, common sunflower, wild mustard, Russian thistle, wild buckwheat, Canada thistle and more than 70 other tough broadleaf weeds.

Reliable control means fewer trips across your fields. Each time you

save a trip, you're also saving soil moisture, time and fuel. With today's fuel prices, that's good money kept in your pocket.

Plus Agility™ SG is the latest addition to a new generation of herbicides featuring TotalSol® soluble granules, an advanced formulation that dissolves completely for more consistent weed control and faster, easier spray-tank cleanout.

The benefits of Agility™ SG

New Agility™ SG is one of the most technically advanced herbicides on the market today:

- Four active ingredients with two modes of action in one product — delivers control in a single product formulation.
- Just one product to measure — saves time and reduces the risk of measuring errors.
- Controls kochia — including resistant varieties — for a cleaner start for your next crop.
- In many cases, controls even those bigger emerged weeds that are often missed due to their large size (see label for maximum weed heights for best performance).
- Advanced, patented formulation dissolves completely in water — gets more product on the weeds for better control, leaves less in the tank for easier cleanout.

Rotation flexibility for key fall crops, such as wheat, and key spring

crops, such as corn and sunflowers — the most flexible crop rotation is with a use rate of 1.6 to 2.4 ounces per acre (see label for specific rotation qualifiers).

New formulation dissolves completely

Agility™ SG herbicide is formulated with DuPont™ TotalSol® soluble granule technology, an advanced formulation that dissolves completely in water, which makes cleaning out spray equipment easier and improves performance:

- Dissolves completely in water unlike older dry flowable (DF) suspensions — so it is easier to remove any product residue from the tank, thereby improving tank cleanout.
- Offers more consistent control of broadleaf weeds under a wider variety of environmental conditions compared to DF suspensions with the same active ingredients.
- Can be used in a tank mix with a variety of grass and broadleaf weed herbicides.
- Can be tank mixed with most pesticides labeled for use in cereal grain production.
- Is virtually dust-free.
- Performance is optimized by the addition of non-ionic surfactants and other spray adjuvants.

How to get the best results with DuPont™ Agility™ SG

- Apply 1.6 to 3.2 ounces per acre of Agility™ SG to fallow fields.
- Agility™ SG can be applied either post harvest in the fall, spring or summer during the fallow period or to crop stubble/set-aside acres.
- Apply as a broadcast or spot treatment to emerged and actively growing weeds.
- Always include a spray adjuvant. In addition to a spray adjuvant, an ammonium nitrogen fertilizer may be used. Antifoaming agents may be added if needed.
- Agility™ SG can be tank mixed with other herbicides that are registered for use in fallow. Read and follow all manufacturers' label recommendations for the companion herbicide.

Note: Only clean water should be used in preparing Agility™ SG spray solutions. Any tank-mix partners and adjuvants should be added to the spray tank only after the Agility™ SG granules have fully dissolved.

For more information

Get control of more weeds and save fuel, water, money and time with Agility™ SG herbicide from DuPont. Contact your local DuPont crop protection retailer or DuPont representative for more information. And visit us on the Web at agility.dupont.com.

Weeds controlled by DuPont™ Agility™ SG herbicide (partial list)

Agility™ SG effectively controls more than 70 weeds when used according to label directions, including the following:

Buckwheat, wild
Cocklebur, common
Dock, curly
Flixweed*
Henbit
Kochia*
Lambsquarters: common, slimleaf
Mallow, common
Mustard*, blue/purple
Nightshade, black
Pennycress, field (fanweed)
Pigweed: prostrate, redroot, rough, smooth, tumble
Prickly lettuce*
Purslane, common
Ragweed, common
Shepherd's-purse
Sowthistle, annual
Sunflower: common, volunteer
Tansymustard
Thistle*: Canada, Russian
Velvetleaf
Wallflower, bushy/treacle mustard

Weeds partially controlled**

Agility™ SG partially controls the following weeds when used according to label directions:

Dandelion, common
Bindweed, field
Nightshade: cutleaf, hairy, silverleaf

- * See the Specific Weed Problems section of the product label for more information.
- ** Partial control: A visual reduction of weed population as well as a significant loss of vigor. For better results, use the highest recommended rate of Agility™ SG and include a tank-mix partner such as 2,4-D, MCPA or bromoxynil (such as Buctril, Bison, Bronate or Bronate Advanced). Refer to the Tank Mixtures section of the product label.

Agility™ SG herbicide is not available in all states. See your local DuPont retailer or representative for details and availability in your state.
