## ***DuPont™ Envive™ herbicide offers convenient, broad-spectrum spring weed control in soybeans***

*“Our customers apply DuPont™ Envive™ herbicide with 2,4-D and glyphosate in late March as a burndown before planting soybeans. They appreciate the convenience of applying it early in spring when they have more time. And Envive™ is easy to use, with just one rate on all soils.*”

*“Marestail is one of our biggest weed challenges, along with winter annuals such as chickweed and henbit. Lambsquarters is also becoming more of a problem. Envive™ did a good job of handling all of them in soybeans. We’ll be recommending it to growers next spring.”*
