INNOVATIONS

The U.S. Environmental Protection Agency (EPA) has registered DuPont Professional Products' Acelepryn insecticide. Acelepryn controls every white grub species and other turf pests such as the annual bluegrass weevil, billbugs and caterpillars. Acelepryn controls multiple pests with a single, early application. Acelepryn is an EPA Reduced Risk classified active ingredient with low impact to non-target organisms such as beneficial arthropods as well as bees, birds, fish and mammals. Its active ingredient, Calteryx, is an entirely new class of chemistry and mode of action. It has the lowest water solubility and lowest application rate for white grub control on a wide range of sites, including golf courses and commercial and residential turf sites, as well as landscape ornamentals including trees, shrubs, foliage plants, flowers and non-bearing fruit and nut trees.
