

DuPont Fire Extinguishants

The Science of Protection™

The DuPont family of fire extinguishants, coupled with fire suppression equipment from leading manufacturers, offers the total solution for fire protection. The superior performance of these products enables them to meet the most demanding conditions in the fire protection industry.

DuPont fire extinguishants are safe for people, electrically nonconductive, noncorrosive, and free of residue. Unlike Halon, they do not contain chlorine or bromine and therefore have zero ozone depletion potential.

FE-25™ DuPont™ FE-25™ is electrically nonconductive, noncorrosive, free of residue, and is an environmentally preferred alternative. As a clean agent, FE-25™ mixes thoroughly in air and does not leave behind any residue, which would cause damage or pose a post-fire clean-up problem. This means no collateral damage and minimal business interruption.

FE-227™ DuPont™ FE-227™ is intended to prevent or extinguish fires in situations where conventional extinguishing agents such as water, dry chemicals and carbon dioxide are unacceptable because they cause collateral damage, significantly interrupt business productivity or present a safety risk. FE-227™ is effectively used in installations involving delicate or irreplaceable materials such as those found in museums, libraries and historical sites.

FE-36™ DuPont™ FE-36™ portable fire extinguishers are used to protect high-value assets such as process control rooms, computer rooms, museums, banks, laboratories and airplanes. FE-36™ has low toxicity and is exceptional for use in relatively small spaces.

FE-13™ Of the clean agents available, DuPont™ FE-13™ has the lowest toxicity and is the safest for protecting areas where people are present. FE-13™ is effectively used in normally occupied areas such as oil rig platforms, electrical control rooms, flammable liquid processing areas and mobile communication facilities.
