

Get a great finish—faster, easier and safer than ever before.

DuPont™ Sontara®
PRE-SATURATED SURFACE
PREPARATION WIPES

The miracles of science™

DUPONT™ SONTARA® PRE-SATURATED WIPES — ENGINEERED TO DELIVER GREAT FINISHES.

You've got the skills and know-how to get a great automotive finish. Now get the best surface preparation products available and do it faster, easier and safer than ever before. DuPont™ Sontara® Pre-Saturated Wipes — Solvent Cleaner Wipes, Waterborne Cleaner Wipes and Static Control Wipes — offer distinct advantages to help you achieve a great finish.

Increased Productivity

With Sontara® Pre-Saturated Wipes, there's no need to pour cleaner or solvent onto a cloth or spray it on the surface

of the parts being cleaned. Just grab a pre-saturated wipe from an easy-dispensing canister or individual packet and you're ready to get to work.

More Effective Cleaning

Each Sontara® Pre-Saturated Wipe is designed to contain the optimum amount of cleaner or solvent, so you get a smoother, more thorough application of cleaner to the surface than with the spraying method.

Safer Handling and Use

By using Sontara® Pre-Saturated Wipes,

the cleaner remains safely contained in the package until it is ready to use. This way no open containers of solvent remain in the work environment.

Reduced Waste

With Sontara® Pre-Saturated Wipes, there is no spillage that can occur when pouring solvents from a container to saturate a dry wipe.

Enhanced Profitability

Sontara® Pre-Saturated Wipes enable you to measure and control your cost of cleaning per vehicle.

PRE-SATURATED CLEANING WIPES

SOLVENT CLEANING

Sontara® Pre-Saturated Solvent Cleaner Wipes* can be used on metal surfaces to remove wax, grease, sanding sludge, dirt and road tar. They come in 2 different formulas:

Winter – PS-3970S

Summer – PS-3990S

*Do not use on plastic

WATERBORNE CLEANING

Sontara® Pre-Saturated Low VOC Cleaner Wipes are a waterborne cleaner designed for use on topcoat, sanded substrates, OEM finishes, cured and repainted surfaces, sanded primers and cured sealers. They do an outstanding job of helping to remove fingerprints, grease smears, compound sludge, sweat, bird droppings and road tar.

How to use the Solvent & Waterborne Cleaning Wipes:

1. Wipe the surface with a clean Sontara® Pre-Saturated Cleaning Wipe to loosen contaminants.
2. Apply moderate pressure and maintain even strokes from end to end when wiping the surface area. Fold the wipe repeatedly to expose a clean surface.
3. Follow immediately by thoroughly drying the surface with a clean Sontara® Solvent Wash & Dry Cloth (E-4142 or E-4143) to lift surface contaminants.

PRE-SATURATED STATIC CONTROL WIPES

STATIC REDUCTION

Best used as a final wipe before applying paint or primer, DuPont™ Sontara® Pre-Saturated Static Control Wipes dramatically help reduce static generation. This minimizes the attraction of airborne dirt that could be re-deposited on the part after wiping, thus lowering the risk of paint defects.

Pre-saturated with isopropyl alcohol and de-ionized water (IPA/DIW), these wipes are available in different blends to meet various temperature and humidity levels:

- **Moderate speed – PS-3975S** is a 70% IPA/30% DIW blend that is ideal for moderate temperature and/or moderate humidity conditions.
- **Slow speed – PS-3995S** is a 50% IPA/50% DIW blend that is ideal for high-temperature and/or high-humidity conditions.

How to use the Static Control Wipe:

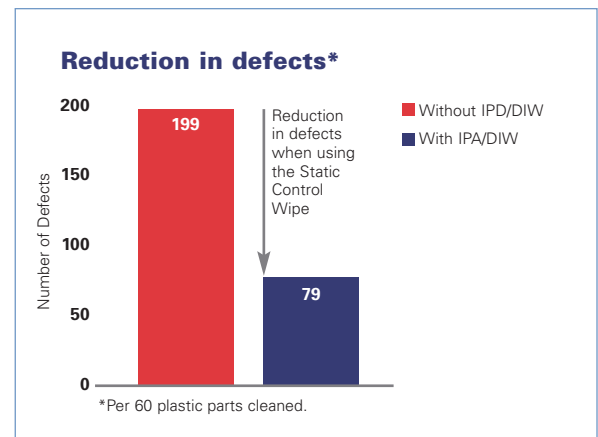

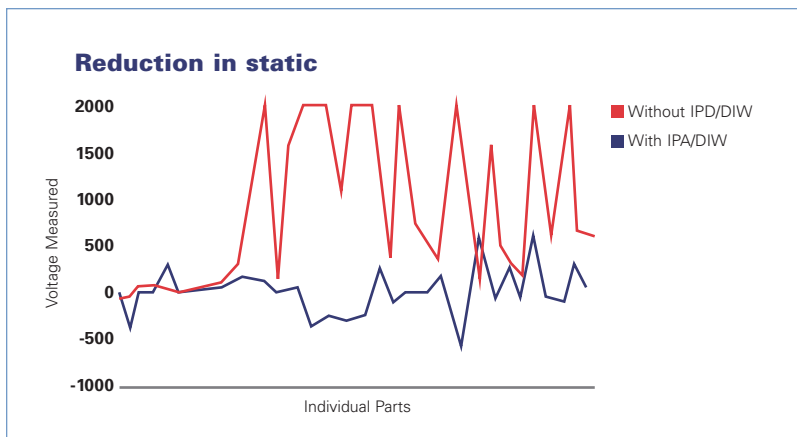

1. Follow recommended surface cleaning practices as described by the paint manufacturer prior to using the Static Control Wipe.
2. Apply moderate pressure and maintain even strokes from end to end when wiping the surface area. Fold the wipe repeatedly to expose a clean surface.
3. Let air dry, then proceed with basecoat.

How does the DuPont™ Sontara® Static Control Wipe Work?

Plastic parts and other surfaces can possess static charge, especially in cool, dry months. The static charge can draw dust and dirt to the surface of the part.

The pre-saturated isopropyl alcohol/de-ionized water wipe will help reduce the static charge that attracts dirt and lowers the risk of paint defects.

The graphs below show measurements of how static was reduced on plastic parts during trials. The end result was fewer defects in the finish.

PRE-SATURATED WIPES

Product Guide

SKU#	Product Description	Wiper Size	Wipes/Pkg.	Total Count
Solvent Cleaning Wipes				
Winter: PS-3970S	Mid-Temp Solvent Cleaner Wipe	12" x 15"	45 packets/dispensing box	6 dispensing boxes/case
Summer: PS-3990S	High-Temp Solvent Cleaner Wipe	12" x 15"	45 packets/dispensing box	6 dispensing boxes/case
E-4600	Magnetic rack for dispensing box of individual packets	—	—	1 rack/box
Waterborne Cleaning Wipes				
PS-3909S WP	Low VOC Cleaner Wipe	12" x 15"	45 packets/dispensing box	6 dispensing boxes/case
E-4600	Magnetic rack for dispensing box of individual packets	—	—	1 rack/box
Static Reduction Wipes				
Moderate Speed PS-3975S WP	70% IPA / 30% DIW	12" x 15"	45 packets/dispensing box	6 dispensing boxes/case
E-4600	Magnetic rack for dispensing box of individual packets (use with PS-3975S)	—	—	1 rack/box
Slow Speed PS-3995S	50% IPA / 50% DIW	12" x 15"	20 wipes/roll in a pouch	6 pouches/case
E-4520	Dispensing canister (for use with PS-3995S)	—		6 canisters/case
