

Tedlar®

polyvinyl fluoride film

Tedlar® Films for Transfer Print Applications

Tedlar® films are ideal materials used as a carrier for screen-printed transfer labels for manufacturers of rubber hoses and fan belts. For many companies, *Tedlar*® has become the material of choice, displacing triacetate and other materials.

Benefits From Using Tedlar®

Excellent Printability and Release Properties

Offers excellent printability and releases cleanly from rubber and metal tubing during steam curing of rubber hoses and fan belts.

Shrugs Off Temperature and Moisture

Tedlar® has a higher use temperature than triacetate and is not affected by moisture.

Tough and Durable

Resists tearing and maintains toughness through aggressive cycles.

Takes the Heat

Offers excellent thermal stability. Resists embrittlement and degradation at processing temperatures up to 190°C (374°F).

Available in Popular Sizes

Tedlar® films are available in nominal thicknesses of 1mL, 1.5 mil, and 2.0 mil and widths up to 72 in.

Unlike other products like triacetate, *Tedlar*® will lay flat days after conversion from roll form to sheeted goods.

Tedlar®, manufactured by DuPont, is ISO 9002 registered.

For more information about *Tedlar*® PVF films, call DuPont at (800) 255-8386 or visit our Web site at www.tedlar.com.
