Description
DuPont™ Teflon® PTFE 62XT is a polytetrafluoroethylene fine powder resin used primarily for paste extrusion. Teflon® PTFE 62XT offers the excellent combination of properties typical of the Teflon® fluoropolymer resins:
• non-aging characteristics;
• chemical inertness to nearly all industrial chemicals and solvents;
• exceptional dielectric properties, stable with frequency and temperature;
• toughness and flexibility;
• low coefficient of friction;
• non-stick characteristics;
• negligible moisture absorption;
• excellent weather resistance;
• service temperature up to 260 °C (500 °F);
• useful properties at -240 °C (~-400 °F);
• moderate stiffness and high ultimate elongation.

Compared with other grades of PTFE fine powder, Teflon® PTFE 62XT is a premium resin that has increased thermal stability, superior flex life, superior stress crack resistance, low permeability and high clarity.

Teflon® PTFE 62XT is designed for processing at medium to high reduction ratios of 400:1 to 1600:1. It is particularly suitable for production of high quality tubing, spaghetti tubing and wire coating. This grade is also highly suitable for after-processing technologies such as flanging, welding, blow moulding and convoluting.

Teflon® PTFE 62XT meets the following requirements:
• ASTM D4895-10, Type I, Grade 3, Class D

Typical Applications
Teflon® PTFE 62XT is used primarily in the production of tubing installed in applications requiring the ultimate in reliability and performance. Applications are found in the chemical, pharmaceutical, and automotive industries where contact with hydraulic fluid, hydrocarbon fuel or reactive gases is required. One such application is high pressure tubing in heat exchangers.

Processing
Teflon® PTFE 62XT is extruded using a liquid processing aid such as naphtha. In the paste extrusion process, the powder is mixed with a lubricant aid and then compressed into a cylindrical preform slug under light pressure (1.5 MPa ~ 220 psi). The preform slug is placed in the cylinder of a paste extruder where the composition is forced under high pressure through a finishing die to produce beading, tubing or wire coatings.

After extrusion, the product is a low-density, but coherent, fibrous structure. Teflon® PTFE 62XT is usually processed further, with heat, into a solid resin product such as tubing. Heat is applied in two steps, which may be taken in-line with extrusion or separately. The lubricant must be removed first, usually by heating within the range of 100–300 °C (212–572 °F). A sintering step follows to melt the resin above its melting point of approximately 342 °C (648 °F) and produce the void-free, solid PTFE resin.

Food Contact Compliance
Properly processed products (sintered at high temperatures common to the industry) made from Teflon® PTFE 62XT resin can qualify for use in contact with food in compliance with FDA 21 CFR 177.1550 and European Regulation (EU) No 10/2011. For details and information, please contact your DuPont representative.

Safety Precautions
Before processing any fluoropolymers, read the Material Safety Data Sheet, available upon request from our Customer Care Group at (800) 207-0756 in the US or (302) 996-7906 (outside of the US). Also read the detailed information in the latest edition of the “Guide to the Safe Handling of Fluoropolymer Resins,” published by the Fluoropolymers Division of The Society of the Plastics Industry (www.fluoropolymers.org) or by PlasticsEurope (www.plasticseurope.org).

Storage and Handling
Teflon® PTFE Fine Powder Resins must be handled carefully to avoid shearing the powder prior to extrusion. Fibrillation by shearing is not reversible, and damaged particles can appear as defects in the finished product. As temperature is reduced below the transition point of 19 °C (66 °F), the powder becomes progressively less sensitive to mechanical damage or compaction in its containers.

**Note:** Teflon® PTFE 62XT meets the requirements of ASTM D4895-10, Type I, Grade 3, Class D.

1 Typical properties are not suitable for specification purposes.

DuPont recommends that powder compacted during shipping and storage be restored to its optimum condition by cooling it for one or two days below 19 °C (66 °F), followed by screening through a 2 to 4.76 mm opening sieve (4 to 10 mesh). Lumps which are retained on the sieve that can be broken up by shaking at temperatures below 19 °C may be used; however, harder lumps that cannot be broken up should be discarded.

All processing steps prior to preforming should be done at reduced temperature, but ambient dew point must be controlled to prevent condensation on the resin. Storage and handling facilities should be clean to avoid any cross contamination. The high sintering temperature causes even very small foreign particles to become visible or to cause defects in finished products. Keep resin drums closed and clean.

**Packaging**
Teflon® PTFE 62XT resin is packaged in 25 kg (55.1 lb) plastic containers. For convenient shipment, orders of 300 kg (661.4 lb) pallets (12 drums) are recommended.

**CAUTION:** Do not use DuPont materials in medical applications involving permanent implantation in the human body or contact with bodily fluids or tissues unless the material has been provided from DuPont under a written contract that is consistent with DuPont policy regarding medical applications and expressly acknowledges the contemplated use. For further information, please contact your DuPont representative. You may also visit [www.teflon.com/industrial](http://www.teflon.com/industrial) to download a copy of the “DuPont POLICY Regarding Medical Applications” H-50103 and “DuPont CAUTION Regarding Medical Applications” H-50102.

For medical emergencies, spills, or other critical situations, call (800) 441-7515 within the United States. For those outside of the United States, call (302) 774-1000.

**How to Use the DuPont™ Teflon® Brand Name with Your Product**

Teflon® is a registered trademark of DuPont for its brand of fluoropolymer resins, coatings, films and dispersions. The Teflon® brand name is licensed by DuPont in association with approved applications. Without a trademark license, customers may not identify their product with the Teflon® brand name as DuPont does not sell such offerings with the Teflon® trademark. Unlicensed customers may refer to the DuPont product offering with only the DuPont name and product code number descriptor as DuPont sells its product offerings. There are no fair use rights or exhaustion of rights to use the Teflon® trademark from buying from DuPont, a DuPont customer or a distributor without a trademark license from DuPont.

If you are interested in applying for a trademark licensing agreement for the DuPont™ Teflon® brand, please contact DuPont at (800) 207-0756 in the U.S., or call (302) 996-7906 (outside of the U.S.).
